Health Canada is in the process of aligning WHMIS with the United Nation's Globally Harmonized System (GHS). When alignment is complete, WHMIS hazard symbols will be replaced by GHS styled pictograms on hazardous product labels. Hazardous product classification and categorization determines which pictograms appear on a chemical's label. Based on an agreement signed by Canada and the United States, it is expected that Health Canada will enact WHMIS after GHS by June 1, 2015 (to coincide with a key U.S. GHS adoption deadline) with a transition period for Canadian businesses will follow.
