

Innovation Farms Powered by AgExpert

Abstract: Innovation Farms Powered by AgExpert is located on Rutherford Farms, a 5,500-acre full-scale commercial seed farm that provides industry and academics access to leading-edge equipment, technology, and production practices. Multiple years of historical data and on-farm trials provide a valuable benchmark for future trials and demonstrations, making it an ideal space to foster innovation. The Enterprise Machine Intelligence and Learning Initiative (EMILI) is a digital agriculture accelerator, based in Manitoba with projects that span the country. We work with industry and academia to advance the adoption of intelligent technologies and to provide people with the skills and training required to succeed in a digital economy. Working together, we can increase integration of intelligent technologies, empower people with digital skills, support scale-ups to grow in the prairies, and accelerate Canada's growth as a leader in digital agriculture.
