### K'ap'iga'lit Kwa a las Gathering Together - The Place We Are : Indigeneity in Public Space

In the city, the spaces between buildings play an essential role in the urban landscape, often becoming the places for shaping and experiencing the local identity. Jan Gehl believes that public spaces "in nearly all situations, rank as more essential and more relevant than buildings themselves"<sup>1</sup> when shaping the identity of the urban environment. These spaces are often the setting for calling attention to larger social and political issues at hand within the city.

According to Statistics Canada, over half of the Indigenous population, and nearly two-thirds of the Métis population, live in metropolitan areas.<sup>2</sup> Indigenous culture is rich; expressed through language, storytelling, and ceremony. However, a complicated and often painful relationship to a colonial past exists, one that continues to impact current generations; many within cities growing up disconnected from their language and culture. This thesis project will explore how the design of public spaces can become places of cultural expression for urban indigenous populations, and create shared spaces to celebrate, witness, and learn about indigenous cultures.
