(After vinyl
has been cut)

Weeding is the process of removing the extra vinyl around cut graphics, shapes or letters, students can save money on their projects by doing the weeding themselves which saves them a weeding fee.

Application Tape/Transfer Tape is used to transfer the cut graphics, shapes or letters from the vinyl release liner to the final installation surface, the tape is applied after the vinyl has been weeded and the tape is removed once the vinyl has been applied to it's final installation surface.
