Job Title: Post Doctoral Fellow

Job Description:
A post-doctoral position is available for highly motivated candidates with a strong background in wheat cereal chemistry, genetics and technological evaluation of wheat for breadmaking. A background in plant science and agronomy are assets for the position. The project involves a study of the influence of genotype, weather and the growing environment, and select crop management practices on the quality and gluten strength of Canadian hard red spring wheats.

Applicants should hold a PhD degree and have strong laboratory and analytical skills. A demonstrable record of publication in peer-reviewed journals is essential. Significant experience in one or more of the following techniques are required: wheat milling, rheological testing of doughs, HPLC and electrophoresis of gluten proteins.

Applications including curriculum vitae, a brief summary of past, current and future research interests and accomplishments, reprints of publications, two to three references and expected availability date should be submitted to:

Dr. Harry Sapirstein
