Introduction to Environmental Design - EVDS 1600
Darcy Granove

On-Line Study
3:00PM – 4:30PM
Tuesday / Thursday
June 1 – Aug 14, 2020

Course Description as per University of Manitoba Course Catalogue:
An introduction to the philosophies, theories, practices, processes and methods that collectively compose the discipline of Environmental Design. The focus will be on the social, environmental, and technological issues that shape the built environment and on an examination of the challenges and roles facing environmental designers in the contemporary world.

General Course Information: Course Description
This course offers an introduction to the spatial, cultural, ecological, economic and social foundations of environmental design and encourages students to recognize the complementary aspects of the integrated disciplines that contribute to the shaping of the built environment. Lectures, presentations, discussions and project-based provide awareness of the specific skills of practice-based thinking, research, analysis, creativity, critical thinking and community engagement required for understanding, interrogating and designing the built environment.
