Course Outline

Instructor
- Prof. Ian Jeffrey, E.I.T.
  E3–546 EITC
  (204) 474–7476
  Ian.Jeffrey@umanitoba.ca

Office Hours
- Tuesdays and Thursdays
  12:30PM–1:30PM
  or by appointment.
  (Please include ECE 2240 in any correspondence and be sure to email from your University account.)

Teaching Assistant
- Max Hughson
  hughsonm@myumanitoba.ca
- Chaitanya Narendra
  umnarend@myumanitoba.ca

Contact Hours
- 4 credit hours
- Lectures:
  3 hours x 13 weeks = 39 hours
- Laboratories:
  3 hours x 5 weeks = 15 hours

Prerequisites:
- ENG 2262 Electric Circuits
- MATH 2132 Engineering Mathematical Analysis 2
- COMP 1012 Computer Programming for Scientists and Engineers

Course Website:
http://umanitoba.ca/umlearn

ECE 2240 – Numerical Methods for Engineers

Course Objectives
To obtain an understanding of numerical methods and how they can be used to solve electrical and computer engineering problems. To apply this knowledge by solving practical engineering problems using MATLAB.

Course Content
The following topics will be covered:
- Introduction to numerical methods.
- Solving systems of linear equations.
  a) Gaussian elimination, matrix decomposition, ill-conditioned systems
- Systems of non-linear equations.
- Interpolation and curve fitting.
  a) Least-squares regression
  b) Interpolation using polynomials and splines
- Numerical differentiation.
- Numerical integration methods (quadrature) and their associated errors.
- Solutions of ordinary differential equations (ODEs): initial value problems.
  a) First-order ODEs: Euler, Heun’s and Runge-Kutta methods
  b) Systems of ODEs and higher-order ODEs
- Introduction to numerical solutions of partial differential equations and boundary value problems.
- Optimization. – Time permitting.

Textbook (Optional)

Requirements/Regulations
- Attendance at lectures and laboratories is essential for successful completion of this course. Students must satisfy each evaluation component in the course to receive a final grade.
- It is the responsibility of each student to contact the instructor in a timely manner if he or she is uncertain about his or her standing in the course and about his or her potential for receiving a failing grade. Students should also familiarize themselves with the University’s General Academic Regulations, as well as Section 3 of the Faculty of Engineering Academic Regulations dealing with incomplete term work, deferred examinations, attendance and withdrawal.
- No programmable devices or systems (such as calculators, PDAs, iPods, iPads, cell phones, smart watches, wireless communication or data storage devices) are allowed in examinations unless approved by the course instructor.
- Students should be aware that they have access to an extensive range of resources and support organizations. These include Academic Resources, Counselling, Advocacy and Accessibility Offices as well as documentation of key University policies e.g. Academic Integrity, Respectful Behaviour, Examinations and related matters.

Updated: January 4, 2019
Learning Outcomes

By the end of this course students will be able to:

1. State and define common terms associated with numerical analysis, e.g. analytic solution, numerical solution, mathematical model, approximation error.
2. Use approximations to develop known numerical methods and quantify the effects of these approximations on accuracy and computational cost via complexity and error analysis.
3. Define, explain, compare and contrast different procedures for numerically solving common problems including but not limited to: approximating functions, derivatives and integrals; root-finding; solving linear systems of equations, ODEs, and PDEs; performing regression and interpolation.
4. Implement numerical solutions to common problems in software (Matlab) and report the details of these implementations and their performance in an organized and clear fashion.
5. Demonstrate the effects of numerical parameters and problem size on the performance (accuracy and computational time) of software-implemented numerical methods.

Evaluation

The final course grade will be determined by performance in laboratories, on assignments and examinations. Lab attendance, a passing grade on the final examination and completion of all labs and assignments is compulsory for this course.

* Method of Feedback: F - Formative (written comments and/or oral discussion), S - summative (numerical grade)

Academic Integrity

Students are expected to conduct themselves in accordance with the highest ethical standards of the Profession of Engineering and evince academic integrity in all their pursuits and activities at the university. As such, in accordance with the General Academic Regulations on Academic Integrity, students are reminded that plagiarism or any other form of cheating in examinations, term tests, assignments, projects, or laboratory reports is subject to serious academic penalty (e.g. suspension or expulsion from the faculty or university). A student found guilty of contributing to cheating by another student is also subject to serious academic penalty.

Retention of Student Work

Students are advised that copies of their work submitted in completing course requirements (i.e. assignments, laboratory reports, project reports, test papers, examination papers, etc.) may be retained by the instructor and/or the department for the purpose of student assessment and grading, and to support the ongoing accreditation of each Engineering program. This material shall be handled in accordance with the University’s Intellectual Property Policy and the protection of privacy provisions of The Freedom of Information and Protection of Privacy Act (Manitoba). Students who do not wish to have their work retained must inform the Head of Department, in writing, at their earliest opportunity.
