Course Outline

ECE 2262 – Electric Circuits

Course Objectives

The application of circuit concepts: First and second order circuits’ complete response, AC power and steady state analysis, frequency and transient response and instrumentation of the circuits using operational amplifiers.

Course Content

The following topics will be covered:

- Circuit analysis techniques.
- Introduction to operational amplifiers.
- Storage energy elements, transient behaviour.
- First and second order circuits’ transient response.
- Sinusoidal steady state analysis and steady state response.
- Steady state analysis.
- Maximum power transfer.
- Frequency response.

Textbook

Requirements/Regulations

- Attendance at lectures and laboratories is essential for successful completion of this course. Students must satisfy each evaluation component in the course to receive a final grade.
- It is the responsibility of each student to contact the instructor in a timely manner if he or she is uncertain about his or her standing in the course and about his or her potential for receiving a failing grade. Students should also familiarize themselves with the University’s General Academic Regulations, as well as Section 3 of the Faculty of Engineering Academic Regulations dealing with incomplete term work, deferred examinations, attendance and withdrawal.
- No programmable devices or systems (such as calculators, PDAs, iPods, iPads, cell phones, wireless communication or data storage devices) are allowed in examinations unless approved by the course instructor.

Important Dates

- Term Tests
  February 25th, 2015
  March 11th, 2015
  6:00pm–8:00pm
- Voluntary Withdrawal Deadline
  March 19th, 2015
- Mid-term Break
  February 16–20, 2015
  No classes or examinations
- Good Friday
  April 3rd, 2015
  No classes or examinations
Learning Outcomes

1. Comprehend and apply general circuit-analysis theorems and techniques.
2. Analyze circuits with energy storage elements, ideal op amps, and ideal transformers.
4. Analyze circuits in the sinusoidal steady state, perform steady-state power analysis, and calculate maximum power transfer.
5. Determine and analyze frequency response of RLC circuits.

Evaluation

Students must receive a minimum of 50% on the final examination in order to be eligible to receive a passing grade. Students who are unable to write term tests for medical or other acceptable reasons will have their final examination weighted to include the term test weighting. Students must complete all the laboratories in order to be eligible to receive a passing grade.

Academic Integrity

Students are expected to conduct themselves in accordance with the highest ethical standards of the Profession of Engineering and evince academic integrity in all their pursuits and activities at the university. As such, in accordance with the General Academic Regulations on Academic Integrity; students are reminded that plagiarism or any other form of cheating in examinations, term tests, assignments, projects, or laboratory reports is subject to serious academic penalty (e.g. suspension or expulsion from the faculty or university). A student found guilty of contributing to cheating by another student is also subject to serious academic penalty.
