Course Objectives
From extremely low frequency (ELF) fields of power lines to radiofrequency (RF) radiation of mobile phones to x-ray radiation for medical imaging, we are unintentionally or deliberately exposed to electromagnetic fields. The objective of this course is to learn how electromagnetic fields interact with the body (tissues and cells), how they are measured and controlled (dosimetry), and how they are employed for diagnostic and therapeutic purposes.

Course Content
- Basic concepts in electromagnetic fields
- Electromagnetic properties of tissues
- Interaction of extremely low frequency electromagnetic fields with biological systems
- Interaction of radiofrequency electromagnetic fields with biological systems
- Bioelectromagnetic dosimetry
- Bioeffects of electromagnetic fields
- Electromagnetic fields for therapeutic applications

Other Resources
C. Furse, D. Christensen, C. Durney, Basic Introduction to Bioelectromagnetics (Taylor and Francis, 2009)

Learning Outcomes
1. Understand the fundamental principles of interaction of EM fields with the body
2. Understand the standards and guidelines of EM fields exposure
3. Understand the principles of dosimetry in bioelectromagnetics
4. Being able to numerically (software-based) model the interaction of electromagnetic fields with a biological system.

CEAB Graduate Attributes Assessed
IN.3 – Interprets results and reaches appropriate conclusions.
IE.1 – Understands the social, environmental, economic, health, safety, legal and/or cultural aspects of engineering activities.
Evaluation

The final course grade is determined by the student’s performance on assignments, in laboratories, and on tests and examinations.

*Students must complete all laboratories in order to be eligible to receive a passing grade.*

*Method of Feedback: F - Formative (written comments and/or oral discussion), S - summative (numerical grade)*

Academic Integrity

Students are expected to conduct themselves in accordance with the highest ethical standards of the Profession of Engineering and evince academic integrity in all their pursuits and activities at the university. As such, in accordance with the *General Academic Regulations on Academic Integrity*, students are reminded that plagiarism or any other form of cheating in examinations, term tests, assignments, projects, or laboratory reports is subject to serious academic penalty (e.g. suspension or expulsion from the faculty or university). A student found guilty of contributing to cheating by another student is also subject to serious academic penalty.

Requirements/Regulations

- Attendance at lectures and laboratories is essential for successful completion of this course. Students must satisfy each evaluation component in the course to receive a final grade.
- It is the responsibility of each student to contact the instructor in a timely manner if he or she is uncertain about his or her standing in the course and about his or her potential for receiving a failing grade. Students should also familiarize themselves with the University’s *General Academic Regulations*, as well as Section 3 of the Faculty of Engineering *Academic Regulations* dealing with incomplete term work, deferred examinations, attendance and withdrawal.
- No programmable devices or systems (such as calculators, PDAs, iPods, iPads, cell phones, smart watches, wireless communication or data storage devices) are allowed in examinations unless approved by the course instructor.
- Students should be aware that they have access to an extensive range of resources and support organizations. These include Academic Resources, Counselling, Advocacy and Accessibility Offices as well as documentation of key University policies e.g. Academic Integrity, Respectful Behaviour, Examinations and related matters.

Retention of Student Work

Students are advised that copies of their work submitted in completing course requirements (i.e. assignments, laboratory reports, project reports, test papers, examination papers, etc.) may be retained by the instructor and/or the department for the purpose of student assessment and grading, and to support the ongoing accreditation of each Engineering program. This material shall be handled in accordance with the University’s *Intellectual Property Policy* and the protection of privacy provisions of *The Freedom of Information and Protection of Privacy Act (Manitoba)*. Students who do not wish to have their work retained must inform the Head of Department, in writing, at their earliest opportunity.
