Riddell Faculty Seminar Presents:

Dr. Feiyue Wang,
Department of Environment & Geography, Centre for Earth Observation Science, University of Manitoba

Time: October 12th, 2:30 - 3:30 pm
Room: 218 Wallace Building

“...the Galápagos Islands have captured the imagination of the world ever since Charles Darwin’s first visit in 1835. While studying the mercury cycle in the Arctic Ocean, an unexpected opportunity took us to the enchanted Equatorial Pacific islands. In addition to discovering a new oxidation pathway for mercury in the atmosphere, the nine-month scientific expedition presented us an incredible journey to observe and ponder over the bewildering relationship between man and nature, and between conservation and culture.
