Precipitation and Climate: A Brief Overview

Riddell Faculty Seminar Presents
Dr. Ronald Stewart,
Department of Environment and Geography
Time: March 8th, 2:30-3:30pm
Room: 218 Wallace Building

Precipitation is a fundamental aspect of our climate system, it is essential for life, and its extremes lead to many disasters. In this presentation, a general overview is given of precipitation at the global and regional scales with a particular focus on the Prairies. There are many critical scientific issues that need to be addressed in regards to precipitation as evidenced through upcoming initiatives.
