

# Christen Roos

I enrolled in Textile Sciences to explore the various opportunities that the faculty provides. Real life skills are demonstrated that help prepare students for industry-related jobs that vary from product developer to visual merchandiser to quality manager. The instructors have been exceptional in this department and are always genuinely interested in the success of your degree. I will graduate with a major in Textile Sciences and a minor in Family Social Sciences. Being a part of this faculty as well as the student council has enriched my university experience and has prepared me for real life experiences that I will encounter in the job force.

Christen Roos,  
4th Year Textile Sciences  
Student

What is yours doing?

Textile Sciences

## Which area is for you?

- ◆ Textiles for athletes
- ◆ Protective textiles
- ◆ Special needs textiles
- ◆ Health care textiles
- ◆ Nanotechnology
- ◆ Biodegradable polymers
- ◆ Drug delivery through textiles
- ◆ Textile & apparel production cycle
- ◆ Design and development of clothing and furniture

**The choice is yours.**

## What does Textile Sciences mean to me?

The Department of Textile Sciences is unique in Canada because it offers an undergraduate program that acknowledges the contribution of textiles to human health. Our program covers a broad spectrum of science and techniques related to the textile industry: management, consumer behavior, coloration and functional modification, textile testing and product development. This enables students to get both extensive and intensive training in textile sciences.

**It's about our future.  
What's in yours?**

## Your path to success starts here.

- Multidisciplinary options
- Ability to specialize
- One of a kind program in Canada
- Cutting edge research
- Practical experience
- ◆ Flexible career options
