

Does your child have CAVITIES?

Want a different treatment option instead of fillings?

For more information:

(204) 480-1351

bmittermuller@chrim.ca

ALL participants will receive a **GIFT CARD** after they finish each study visit

What is it?

A **FREE non-invasive treatment (no drills!)** using Silver Diamine Fluoride (SDF) to stop decay from getting worse. We will apply SDF and take plaque samples.

Who?

Children under 6 years of age with active cavities and their parents or caregivers.

Why?

We want to learn if applying SDF at different study visit intervals makes a difference in the success rate to **arrest Early Childhood Caries** in very young children.
