IMPORTANT NOTICE

Lectures and laboratories in this course will initially be conducted via remote instruction but will return to in-person instruction the week of February 28th 2022. All students are required to be present for in-person instruction at that time. Furthermore, University policy requires all students to be fully vaccinated against COVID-19 in order to attend campus and participate in this course.

Course Objectives

An introduction to theory and techniques used for processing and analysis of digital images for autonomous machine interpretation.

Course Content

The following topics will be covered:

- Digital image basics: pixels, colour spaces, logical operations, thresholding, gamma transform.
- Visualizing pixel intensity distributions, contrast stretching, histogram matching.
- Linear filtering: convolution, noise, mean, median, rank order and normal distribution filtering.
- Mathematical morphology and image segmentation.
- Edge, line, corner detection: Laplacian, Gaussian, zero-cross, anisotropic filtering.
- Image shape and texture descriptors.
- Geometrical and topological properties of digital images.
- Image classification.
- Use of Matlab in image and video processing and analysis.

Academic Integrity

Students are expected to conduct themselves in accordance with the highest ethical standards of the Profession of Engineering and evince academic integrity in all their pursuits and activities at the university. As such, in accordance with the General Academic Regulations on Academic Integrity, students are reminded that plagiarism or any other form of cheating in examinations, term tests, assignments, projects, or laboratory reports is subject to serious academic penalty (e.g. suspension or expulsion from the faculty or university). A student found guilty of contributing to cheating by another student is also subject to serious academic penalty.

Learning Outcomes

1. Learning digital image fundamentals: visual perception, digital image pixels, image features.
2. Applying knowledge of Matlab in digital image representation, colour spaces, histogram, quantization of image features.
3. Learning and applying knowledge in analyzing image filtering, DFT, enhancement, and registration methods.
4. Learning and applying knowledge in analyzing image decomposition and reconstruction with wavelets, image morphology, WFT.
5. Learning and applying knowledge in analyzing image segmentation, representation, description, and recognition techniques.

CEAB Graduate Attributes Assessed

- **KB.4** – Recalls and defines, and/or comprehends and applies information, first principles, and concept in specialized engineering science.
- **PA.4** – Evaluates a solution to a complex engineering problem.

Evaluation

The final course grade will be determined from a student’s performance in laboratories, periodic quizzes, 2 term tests, and a final examination. Students must complete all of the laboratories in order to be eligible to receive a passing grade.

Requirements/Regulations

- Attendance at lectures and laboratories is essential for successful completion of this course. Students must satisfy each evaluation component in the course to receive a final grade.
- It is the responsibility of each student to contact the instructor in a timely manner if he or she is uncertain about his or her standing in the course and about his or her potential for receiving a failing grade. Students should also familiarize themselves with the University’s General Academic Regulations, as well as Section 3 of the Faculty of Engineering Academic Regulations dealing with incomplete term work, deferred examinations, attendance and withdrawal.
- No programmable devices or systems (such as calculators, PDAs, iPods, iPads, cell phones, smart watches, wireless communication or data storage devices) are allowed in examinations unless approved by the course instructor.
- Students should be aware that they have access to an extensive range of resources and support organizations. These include Academic Resources, Counselling, Advocacy and Accessibility Offices as well as documentation of key University policies e.g. Academic Integrity, Respectful Behaviour, Examinations and related matters.

Copyright Notice

All materials provided in this course are copyright and are provided under the fair dealing provision of the Canadian Copyright Act. This material may not be redistributed in any manner without the express written permission of the relevant copyright holder.
Retention of Student Work

Students are advised that copies of their work submitted in completing course requirements (i.e. assignments, laboratory reports, project reports, test papers, examination papers, etc.) may be retained by the instructor and/or the department for the purpose of student assessment and grading, and to support the ongoing accreditation of each Engineering program. This material shall be handled in accordance with the University’s Intellectual Property Policy and the protection of privacy provisions of The Freedom of Information and Protection of Privacy Act (Manitoba). Students who do not wish to have their work retained must inform the Head of Department, in writing, at their earliest opportunity.
