UM | Environmental Health and Safety Office

EHS Training Program Catalogue

This catalogue outlines all Environmental Health and Safety (EHS) training programs offered at the University of Manitoba. Courses are organized under six program categories. Where applicable, courses requiring periodic renewal are identified with the symbol ⟳.

Table of Contents

1 Workplace safety and health 4

1.1 Environmental Health and Safety Basics 4

1.2 Environmental Health and Safety for Supervisors 4

1.3 Environmental Health and Safety for Students 4

1.4 Visitor Safety Training 5

1.5 Hazard Recognition 5

1.6 Workplace Safety and Health Committee Basics 5

8.14 UM Confined Space Program (coming soon) 21
8.15 Contractor Safety at the University of Manitoba (coming soon) 22

1 Workplace safety and health

1.1 Environmental Health and Safety Basics

Course Description: Environmental Health and Safety Basics provides information on health and safety in the workplace that is required to be provided to all employees as per the Manitoba Workplace Safety and Health Act and Regulation, including guidance for emergency response at UM. It also provides information to employees of the University of Manitoba on programs provided by the Environmental Health and Safety Office (EHSO) and UM Security Services.

Mode of Course Delivery: online via UMLearn

Applicable Audience: all UM employees (mandatory)

Training Re-Certification Period: N/A

1.2 Environmental Health and Safety for Supervisors

Course Description: The Environmental Health and Safety for Supervisors course informs those who supervise the work of employees of their roles and responsibilities under the Manitoba Workplace Safety and Health Act and Regulation. This training provides direction on how to conduct activities related to their responsibilities in safety at the university including incident reporting, employee rights, hazard recognition and training.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Mandatory for all UM employees in a supervisory role, i.e. with direct reports (e.g. supervisors, managers, directors, etc.)

Training Re-Certification Period: N/A

1.3 Environmental Health and Safety for Students

Course Description: Environmental Health and Safety for Students provide information to students on EHS programs that apply to their own health and safety while learning on the UM campus. This course also introduces students to the Environmental Health and Safety Office and promotes the use of our services where applicable.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All students at the University of Manitoba

Training Re-Certification Period: N/A

1.4 Visitor Safety Training

Course Description: Visitor Safety provides information on health and safety at the University. It includes information on programs provided by the Environmental Health and Safety Office (EHSO).

Mode of Course Delivery: online via UMLearn

Applicable Audience: Recommended for all non-employed visitors to the University of Manitoba who will be conducting work or research

Training Re-Certification Period: N/A

1.5 Hazard Recognition

Course Description: This course provides workers with the skills to identify, assess, and report workplace hazards to prevent incidents. It also introduces control measures including safe work procedures to ensure a safe working environment.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Intended for all workers and supervisors responsible for identifying, assessing, and reporting workplace hazards within their work area.

Training Re-Certification Period: N/A

1.6 Workplace Safety and Health Committee Basics

Course Description: The Workplace Safety and Health Committee Basics course provides information to those employees of the University of Manitoba who volunteer and serve as a member of any workplace safety and health committee, including but not limited to the Local Area Safety and Health committees as well as the Organizational Safety and Health Advisory committee. This training instructs committee members on their duties and responsibilities and the required activities of the committee such as meeting structure and conduct, safety concern resolution, and conducting safety inspections.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All employees who volunteer on a University of Manitoba workplace safety and health committee (e.g. LASH or OSHA committee members)

Training Re-Certification Period: N/A

1.7 Working Alone

Course Description: The Working Alone course will convey information about working alone as required by Part 9 of the Manitoba Workplace Safety and Health Regulation. This

course provides training on hazard identification while working alone, communication plans, and emergency response.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who may work alone. Working Alone is defined as conducting work when you are the only person in the immediate workplace from the organization.

Training Re-Certification Period: N/A

1.8 Introduction to Workplace Safety for Students

Course Description: This course provides students with an introduction to workplace health and safety, including their rights and responsibilities as workers. Students will learn to recognize common workplace hazards, understand basic safety procedures, and identify resources available to help create a safe and healthy work environment.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Students who are entering the workforce, participating in experiential learning opportunities such as placements, internships, co-op, practicums, or work-integrated learning, or seeking to build a foundational understanding of workplace health and safety.

Training Re-Certification Period: N/A

2 Personal Protective Equipment

2.1 Safety Footwear

Course Description: This course informs employees who require safety footwear in order to work safely in their job of: the requirements for safety footwear, selection of safety footwear, how to obtain and use safety footwear, and how to inspect and maintain safety footwear.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who has exposure to hazards that may affect the feet and/or ankles (e.g. electrical hazards, risk of heavy items crushing feet/toes).

Training Re-Certification Period: N/A

2.2 Safety Eyewear

Course Description: This course informs employees who require safety eyewear in order to work safely in their job of the requirements for safety eyewear, selection of safety eyewear, how to obtain and use safety eyewear, and how to inspect and maintain safety eyewear.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who has exposure to hazards that may injure the eyes (e.g. sprays or splashes or punctures from chemicals, dusts and particulates, or from tools and equipment).

Training Re-Certification Period: N/A

2.3 Safety Headwear

Course Description: This course informs employees who require safety headwear in order to work safely in their job of the requirements for safety headwear, how to obtain and use safety headwear, and how to inspect and maintain safety headwear.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who has exposure to hazards that may injure the head (e.g. head bumps or items falling onto the head).

Training Re-Certification Period: N/A

2.4 Respiratory Protection

Course Description: This course informs employees who require masks for respiratory protection of the requirements for respiratory protection PPE, selection of masks and respirators, how to obtain and use masks and respirators, and how to inspect and maintain masks and respirators.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who has exposure to respiratory hazards (e.g. work with chemicals or fumes, dusts and particulates, or exposure to biological agents).

Training Re-Certification Period: N/A

2.5 Safety Gloves

Course Description: This course provides employees who require gloves and other forms of skin protection with the knowledge to select, obtain, use, inspect, maintain, and properly dispose of personal protective equipment (PPE) necessary to perform their work safely.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who has exposure to hazards that may affect the skin (e.g. chemicals and other materials that may cause irritations, burns or punctures).

Training Re-Certification Period: N/A

2.6 Hearing Conservation

Course Description: This course informs employees who require hearing protection in order to work safely in their job of the requirements for hearing protection, selection of hearing protection, how to obtain and use hearing protection, and how to inspect, maintain and dispose of hearing protection.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who has exposure to hazardous levels of noise that may affect their hearing (e.g. any workplace tasks or equipment that produce a noise level of 80 dBA or higher).

Training Re-Certification Period: N/A

2.7 Lab Coat Selection, Use and Care

Course Description: This course outlines when lab coats are required, how they protect against laboratory hazards, and the proper procedures for use, removal, storage, and laundering. Participants will learn their responsibilities for preventing contamination and maintaining a safe laboratory environment.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any individual required to wear a lab coat as part of their laboratory activities must complete this training.

Training Re-Certification Period: N/A

2.8 Hi-Vis Clothing (coming soon)

Course Description: This course informs employees who require hi-vis clothing for their job of the requirements for hi-vis clothing selection, how to obtain and use hi-vis clothing, and how to inspect and maintain hi-vis clothing.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who works on roadways, construction zones or other hazardous areas that require a need to ensure visibility to avoid an incident.

Training Re-Certification Period: N/A

Note: All employees must be provided with information on how to access required PPE for their position.

3 Emergency response and fire safety

3.1 CPR / First Aid Training

Course Description: The CPR / First Aid courses offered meet training requirements as per Part 5 of the Manitoba Workplace Safety and Health Regulation. Employees are trained in cardiopulmonary resuscitation (CPR), airway management automated external defibrillators (AEDs) and treatment of basic injuries that require first aid. The level of course provided is dependent on various factors as assessed by EHSO.

Mode of Course Delivery: Instructor-Lead (external)

Applicable Audience: Employees who have volunteered to represent their area as a person trained in this type of emergency response; also required for employees who work in higher risk activities (see EHSO for a list of these positions)

Training Re-Certification Period: ↻ 3 years

3.2 Fire Warden Training

Course Description: Fire Warden Training is designed to equip employees with the knowledge and skill they need to effectively handle fire or evacuation emergencies.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All employees who volunteer or are assigned to be a department Fire Warden

Training Re-Certification Period: N/A

3.3 Fire Extinguisher Training

Course Description: This training provides basic instruction on fire extinguisher safety, fire classes, extinguisher selection, and the PASS method. This 30-minute session is the classroom portion of the training. A hands-on outdoor extinguisher training session is offered during the summer to allow participants to practice extinguisher use in a controlled environment.

Mode of Course Delivery: Instructor-Lead (EHSO)

Applicable Audience: All employees, strongly recommend those who volunteer or are assigned to be a department Fire Warden.

Training Re-Certification Period: ↻ annually

4 Lab and Research Safety

4.1 Lab Safety – Lab Workers

Course Description: This course provides information on the basics of lab safety including lab signage and hazard communication, personal protective equipment, lab equipment safety, lab design safety requirements, lab decommissioning, lab equipment decommissioning, lab hazard clearances, and visitors to the lab.

Mode of Course Delivery: online via UMLearn

Applicable Audience: all students, staff and faculty who work in a laboratory environment

Training Re-Certification Period: N/A

4.2 Lab Safety – Non-Lab Workers

Course Description: This course provides information on the hazards present in UM laboratories and how to safely conduct ancillary work activities in these areas.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All employees who enter laboratories on occasion for ancillary work (e.g. IST and Facility employees who enter these spaces for their work)

Training Re-Certification Period: N/A

4.3 Field Research Safety

Course Description: **Field Research Safety Training** equips participants with the knowledge to identify hazards, assess risks, and apply controls using the Field Safety Manual to ensure safe and compliant fieldwork.

Mode of Course Delivery: online via UMLearn

Applicable Audience: This course is intended for University of Manitoba workers, students, and researchers who plan, supervise, or participate in field research activities. It applies to anyone conducting work outside of controlled campus environments, including faculty, staff, graduate students, and field assistants.

Training Re-Certification Period: N/A

5 Hazardous materials

5.1 Biological Safety Training

Course Description: This course covers the guiding principles and basic safety measures used in biosafety.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All students, staff, and faculty working or associated with biological laboratories (mandatory)

Training Re-Certification Period: Anyone trained before 2020 must update to the 2024 version

5.2 Biosafety Emergency Response Training

Course Description: The Biosafety Emergency Response course provides information to employees on how to respond to various potential biological emergency events. This course must be taken annually by all workers in a lab with biological agents.

Mode of Course Delivery: online via UMLearn

Applicable Audience: all students, staff, and faculty working or associated with biological laboratories (mandatory)

Training Re-Certification Period: ⟳ 1 year

5.3 Biological Safety Permit Administration

Course Description: This course orients users on the responsibilities of permit holders and process of applying for Biosafety Permits.

Mode of Course Delivery: online via UMLearn

Applicable Audience: all employees who apply for or amend Biosafety Permits (mandatory)

Training Re-Certification Period: N/A

5.4 Chemical Safety

Course Description: The Chemical Safety course provides information to those who work with chemicals on how to properly manage them for their safety, the safety of the UM Community and the safety of the environment. The topics covered in chemical safety management include: chemical handling, WHMIS/GHS, chemical inventory management, chemical storage, chemical waste disposal, chemical spill response and reporting.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All students, staff, and faculty who work with chemicals and require WHMIS training at the University.

Training Re-Certification Period: N/A

5.5 Transportation of Dangerous Goods (Receiving Goods Only)

Course Description: This course is available to individuals who receive dangerous goods only and is not applicable to individuals packaging dangerous goods for export. The course will discuss aspects of how a dangerous good item should be received, proper documentation of received items and information required for a Transport Canada Inspection.

Mode of Course Delivery: online via UMLearn, contact EHSO at EHSO@umanitoba.ca to register

Applicable Audience: all employees who receive dangerous goods only

Training Re-Certification Period: ⟳ 3 years

5.6 UM WHMIS Training

Course Description: Required training by Manitoba Workplace Safety and Health for anyone working with or around hazardous materials. It will give employees the understanding to recognize and work safely with hazardous material to prevent injuries and illness. This does not replace the required Chemical Safety training.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Students, staff, and faculty who must renew WHMIS training annually or every three years.

Training Re-Certification Period: N/A

5.7 Transportation of Dangerous Goods – Ground

Course Description: Any person shipping, receiving, or transporting dangerous goods by ground must be certified for ground transport of dangerous goods. This half-day course will cover all aspects of shipping, transporting, and receiving dangerous goods and is required for all University drivers transporting dangerous goods.

Mode of Course Delivery: Instructor-Lead (internal) contact EHSO to register

Applicable Audience: all employees who ship, receive, or transport dangerous goods by ground

Training Re-Certification Period: ⟳ 3 years

5.8 Transportation of Dangerous Goods – Air

Course Description: Any person shipping or receiving dangerous goods by air must be certified for air transport of dangerous goods. Note: Course attendees may include laboratory staff shipping medical samples by air (medical samples and dry ice are both regulated as dangerous goods). TDG Ground certification is a pre-requisite for this course.

Mode of Course Delivery: Instructor-Lead (internal) contact EHSO to register

Applicable Audience: all employees who ship or receive dangerous goods by air

Training Re-Certification Period: ⟳ 2 years

5.9 Open-Source Radiation Safety Orientation

Course Description: Laboratory staff and students that will be working with open-source radioisotopes such as radiolabelled chemicals and the like, will complete this three-part training program offered through UM Radiation Safety. A self-directed study assignment and accompanying supervisor led lab study/orientation assignment are submitted to EHS for evaluation. This automatically registers the worker as a participant in the full day spill management workshop covering topics such as good laboratory setup, shielding, using survey meters, emergency response procedures and incident reporting. The workshop also includes a live spill exercise and Transportation of Dangerous Goods Class 7 Radioactive Materials certification for receiving shipments.

Mode of Course Delivery: Both self-directed online and Instructor-Lead (internal)

Applicable Audience: Staff and students working directly with open-source radioisotopes

Training Re-Certification Period: ⟳ Refresher Training to workers every 36 months

5.10 Sealed-Source Radiation Safety Orientation

Course Description: Laboratory staff and students that will be working with sealed-source radioisotopes and/or devices containing radioactive sources will first complete a self-directed study assignment based on the content of three modules which cover the theory of radiation, radiation exposure and the legal requirements of working with radioactive sources at our institution. This is followed by a supervisor led lab study/orientation assignment covering hazard assessment and control principles, lab safety compliance and radiation detection equipment. Both are submitted to EHS for evaluation.

Mode of Course Delivery: Both self-directed online and Instructor-Lead (internal)

Applicable Audience: Staff and students working directly with sealed source radioisotopes

Training Re-Certification Period: ⟳ Refresher Training to workers every 36 months

5.11 X-Ray Equipment Self-Study Assignment

Course Description: Individuals routinely using open and closed beam X-Ray equipment in the course of their research or studies will complete a self-study assignment based on the contents of an X-Ray Equipment Safety Orientation delivered in the form of a presentation. The assignment covers topics such as the principles of X-Ray equipment and how it works, how the equipment is used at the University, the Provincial governing regulations on the use of X-Ray equipment, the effects of ionizing radiation and X-Ray exposure and the different ways we reduce the risk of exposure in the course of work. This assignment is submitted to EHS for evaluation.

Mode of Course Delivery: Self-directed online

Applicable Audience: Staff and students working with X-Ray equipment for research purposes (non-human subjects/samples)

Training Re-Certification Period: N/A

6 Building safety

6.1 Asbestos Awareness

Course Description: The Asbestos Awareness course provides information on the identification of asbestos types, asbestos exposure and health effects, and how asbestos containing materials are managed for health and safety at the University of Manitoba.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All Facility employees who are in positions that work either directly or indirectly with building materials, construction or renovation projects.

Training Re-Certification Period: N/A

6.2 Asbestos Safety- Low Risk Activities

Course Description: This course provides training on approved Level 1 low-risk asbestos work activities, including controlled removal, repair, tile replacement, and drilling into asbestos-containing materials using required protective measures.

Mode of Course Delivery: Instructor-Lead (external)

Applicable Audience: Facility workers who are in positions that work directly with building materials, construction or renovation projects that may contain asbestos.

Training Re-Certification Period: 3 Years

6.3 Mould Awareness

Course Description: This course provides basic awareness of mould, including where mould can grow, potential health effects, how to prevent mould growth, and what to do if mould is discovered. This course is for awareness purposes only; specific prevention and cleanup procedures are provided in applicable Safe Work Procedures and departmental processes.

Mode of Course Delivery: UM Learn

Applicable Audience: All staff particularly Facility workers

Training Re-Certification Period: N/A

7 Occupational health

7.1 Ergonomic Training – Material Handling

Course Description: The Material Handling course focuses on proper techniques and body mechanics when lifting and handling materials. This course also identifies when further material handling supports are required to safely conduct the work.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All employees who move objects through the university for work purposes (e.g. push, pull, lift, carry materials)

Training Re-Certification Period: N/A

7.2 Ergonomic Training – Office Ergonomics

Course Description: The Office Ergonomics course focuses on adjusting your personal workstation to prevent musculoskeletal injury and to provide optimal comfort as you work.

Mode of Course Delivery: online via UMLearn

Applicable Audience: All employees who work at a computer workstation

Training Re-Certification Period: N/A

7.3 Outdoor Work Safety – Operations & Maintenance

Course Description: The Outdoor Work Safety course provides Operations & Maintenance employees with practical information to recognize and manage hazards associated with working outdoors. It emphasizes hazard awareness, appropriate controls, safe work practices, and knowing when conditions require work to be modified or stopped.

Mode of Course Delivery: Online via UM Learn

Applicable Audience: Operations & Maintenance employees who perform work outdoors or may be exposed to outdoor work hazards as part of their duties.

Training Re-Certification Period: N/A

8 Construction safety

8.1 Articulating Boom Lift (Bucket Truck)

Course Description: Provides the most current legislative information including the CAN/CSA-CAN/CSA-B354.8:17 Mobile elevating work platforms — Operator (driver) training (ISO 18878:2013, MOD). This course includes a written and practical skill assessment to validate training competencies.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Anyone who is required to operate MEWP/AWP

Training Re-Certification Period: ⟳ 3 years

8.2 Arc Flash

Course Description: The Arc Flash course is based on the latest edition of the Canadian Standards Association (CSA) Z462-21 Workplace Electrical Safety standard and The Manitoba Provincial Workplace Safety and Health Regulations.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Any employee working with electrical hazards

Training Re-Certification Period: ⟳ 3 years

8.3 Ladder Safety

Course Description: The Ladder Safety course instructs the safe use of ladders, ladder inspection processes, ladder maintenance and documentation. This course will include information on steps ladders, extension ladders and fixed ladders.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who uses a ladder for work

Training Re-Certification Period: N/A

8.4 Lockout / Tag Out

Course Description: The Lockout and Tag Out course provides information on the Lockout / Tag Out Program at the University of Manitoba and how to utilize it within an employee's regular work activities.

Mode of Course Delivery: online via UMLearn

Applicable Audience: Anyone who works with energized devices and may need to control hazardous energy at the University of Manitoba.

Training Re-Certification Period: N/A

8.5 Working at Heights Awareness

Course Description: Provides an overview of the hazards associated with working at elevated locations and the controls required to reduce the risk of falls. This course introduces key concepts such as hazard identification, safe work practices, fall prevention measures, and individual responsibilities when working near edges, openings, rooftops, ladders, and other elevated work areas. Participants will gain an understanding of when additional training, planning, or authorization is required and how to work safely and in compliance with workplace safety requirements.

Mode of Course Delivery: online via UM Learn

Applicable Audience: Employees, staff and students who require access to elevated work areas.

Training Re-Certification Period: N/A

8.6 Forklift

Course Description: During this 2-day course, safety trainers and consultants will teach new forklift operators the theory and practical training they need to meet Manitoba regulations and CSA standards.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Any employee who operates a forklift

Training Re-Certification Period: ⟳ 3 years

8.7 Skid Steer Loader

Course Description: Skid steer loaders fall under Part 22 of the Manitoba Safety Regulations and have similar hazards as operating a forklift. The Skid Steer Loader Training course provides students with the most current legislative and industry best practice information regarding powered mobile equipment. This course includes a written and practical skill assessment to validate training competencies.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Any employee who operates a skid steer loader

Training Re-Certification Period: ⟳ 3 years

8.8 Flag Person

Course Description: This course is structured for anyone involved in traffic management. They must also demonstrate competency in applying this training at the workplace. This certification course is designed for workers with no previous experience as a flag person

and will enable employers to meet their legislative responsibilities under the Workplace Safety & Health Act. This course includes a written assessment to validate training competencies.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Anyone who is involved in directing traffic on roadways

Training Re-Certification Period: ⟳ 3 years

8.9 Confined Spaces

Course Description: The Confined Space Entry course allows entrants, attendants, and supervisors to understand and evaluate the hazards and procedures associated with confined spaces safely and confidently. It will outline the duties and responsibilities of team members, as well as review emergency rescue procedures and plan development. In addition to confined space entry procedures and hazards, this course will discuss the need for appropriate personal protective equipment, the selection characteristics, and pre-entrance testing for each level of protection. Documentation will be provided to the student to satisfy due diligence and local regulation compliance. This course meets the criteria for accepted practices in occupational health and safety training (CAN/CSA Z1006-10), the highest standard in the industry. Students will demonstrate their understanding throughout the course using written and practical skill assessments.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Any employee who enters confined spaces

Training Re-Certification Period: ⟳ 3 years

8.10 Aerial Work Platforms (Mobile Elevated Work Platforms)

Course Description: Our training provides the most current legislative information on mobile elevated work platforms including the CAN/CSA-B354.7 and CAN/CSA-B354.8 Mobile Elevating Work Platforms. The MEWP training course includes a written and practical skill assessment to validate training competencies.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Any employee who uses a mobile elevated work platform, e.g. scissor lift

Training Re-Certification Period: ⟳ 3 years

8.11 Fall Protection

Course Description: This course provides the most current legislative information, including industry best practices. This program teaches participants how to exercise the hierarchy of controls of fall prevention, fall restraint, and fall arrest as each situation will be different when working at heights. Students will learn how to inspect fall protection equipment, how to don a harness, and set up a personal fall protection system. Students will also have the opportunity to experience what it feels like to hang in a harness. Participants will receive a certificate upon successful completion of this course. This course includes a written and practical skill assessment to validate training competencies.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Any employee who works from heights of around 3 m or higher as well as other requirements specified in Part 14 of the Manitoba Workplace Safety and Health Regulation

Training Re-Certification Period: ⟳ 3 years

8.12 Scaffolding

Course Description: This course will lead the student in proper procedures for building mobile and stationary scaffolding. This program will also give the participant a solid working knowledge of inspecting scaffolds according to current OH&S and CSA standards. There will be both theory and practical components covered in this course.

Mode of Course Delivery: Instructor-Lead (external); Safety Services Manitoba

Applicable Audience: Anyone who requires scaffold equipment to perform tasks

Training Re-Certification Period: ⟳ 3 years

8.13 Electrical Safety Awareness (coming soon)

Course Description: The Electrical Safety Awareness training has a goal of providing information on electrical hazards for those who work around electrical equipment and devices. This course may be used to advise employees when further safety training is required (i.e. Arc Flash training).

Mode of Course Delivery: online via UMLearn

Applicable Audience: Any employee who may be exposed to an electrical hazard.

Training Re-Certification Period: N/A

8.14 UM Confined Space Program (coming soon)

Course Description: The UM Confined Space Program course provides information on responsibilities, documentation and required actions in order to comply with confined space requirements at the University of Manitoba. Content includes assessment and entry

procedures, permit information, atmospheric monitoring and emergency response equipment and activities. This course is meant to compliment the external training provided by Safety Services Manitoba and both are mandatory for that work in confined spaces.

Mode of Course Delivery: online via UM Learn

Applicable Audience: all employees who may enter confined spaces for work or their supervisors

Training Re-Certification Period: N/A

8.15 Contractor Safety at the University of Manitoba (coming soon)

Course Description: The UM Contractor Safety course describes the requirements for all contractors to be able to work within the safety programs established at the University of Manitoba. It provides information on the expectations of contractors as well as information on the programs within the Environmental Health and Safety Office.

Mode of Course Delivery: Instructor-Lead (internal)

Applicable Audience: All applicable contractors hired to conduct work at the University of Manitoba as well as designated employees of the university who hire contractors.

Training Re-Certification Period: N/A
