Course Details

Course Title & Number: BIOE 4610 Design of Assistive Technology Devices
Class Times & Days of Week: Lectures: MWF 9:30-10:20
                      Labs: M 2:30-5:15
Location for classes/labs/tutorials: 300 Human Ecology Building
Pre-Requisites: BIOL 1412 Human Physiology

Course Description:
Application and design of technology for individuals with disabilities; emphasizing the development of the requisite knowledge, skills, and attitudes to evaluate, design, and implement client-centred assistive technology. A multi-disciplinary approach will be emphasized with instructors from both the Department of Biosystems Engineering and the Department of Occupational Therapy participating in delivery of the course. Students will complete a design project.

Instructor Information

Instructor(s) Name: Dr. Danny Mann, P.Eng. (Professor & Department Head)
Office Location: E2-376F EITC
Office Hours or Availability: By appointment
Office Phone No. 204-474-7149
Email: Danny.Mann@umanitoba.ca

Instructor(s) Name: Dr. Jacquie Ripat
Office Location: R131 Rehab Building
Office Hours or Availability: By appointment
Office Phone No. 204-789-3303
Email: Jacquie.Ripat@umanitoba.ca

Teaching Assistant: Ms. Sarah Slagerman
Office Location: A115 Agricultural Engineering Building
Office Phone No. 204-474-7446
Email: slagerms@myumanitoba.ca

Textbook, Readings, Materials

Required textbook – The following book is available from the University of Manitoba Bookstore.

General Course Information

This course is modeled on the interdisciplinary approach used by practicing occupational therapists and rehabilitation engineers to identify suitable technological aids for an individual with a disability. Drawing on experiential learning theory and an interprofessional learning approach, engineering students in this unique course will learn how to perform a clinical assessment of a client with a disability. Participation in a clinical assessment gives the assessor an understanding of the unique abilities of the client, the environment in which the client lives and works, and the interaction between the client and the environment.

How does this course fit into the curriculum?
This course is one of the design electives available for students in the Biosystems Engineering program. It is a required course for students choosing to complete the Biomedical Specialization. Design electives are typically taken by Biosystems Engineering students in either the third or fourth year of the program.

Course Goals
The intent of this course is:
- To introduce students to the field of rehabilitation engineering, specifically the provision of assistive technology devices for individuals with disabilities.
- To provide students with a real-life design opportunity.
- To introduce students to the process of clinical assessment as a tool that can be used in the analysis of a design problem involving client-centred assistive technology.
- To introduce students to the tools used in outcome assessment.
- To provide students with an opportunity to collaborate equitably with group members in a team setting to manage an engineering design project.
- To provide students with opportunities to effectively communicate a design solution (written and oral).

Intended Learning Outcomes
At the conclusion of the course, the student should be able to:
1. Explain the basic categories of assistive technology and the basic characteristics of each category of assistive technology.
2. Analyze a case scenario to select an appropriate category of assistive technology device.
3. Use tools of clinical assessment and outcome assessment in a design scenario involving client-centred technology.
4. Design and evaluate an assistive technology device for a client with a disability.
5. Summarize the results of the design process in a formal report and oral presentation.
6. Apply what was learned in the classroom to novel situations in the workplace.

Expected Level of Development in Course **

*Attributes:
- KB: A knowledge base for engineering
- PA: Problem analysis
- IN: Investigation
- DE: Design
- ET: Use of engineering tools
- IT: Individual and team work
- CS: Communication skills
- PR: Professionalism
- IE: Impact of engineering on society/environment
- EE: Ethics and equity
- EP: Economics and project management
- LL: Life-long learning

**Expected Level of Development:
- I – Introductory
- D – Intermediate
- A – Advanced
Course Evaluation Methods

- Laboratory Assignments 20%
- Weekly Homework Assignments 10%
- Design Project 25%
- Midterm Examination 15%
- Final Examination 30%

All courses in the Biosystems Engineering program are expected to contribute, in some way, to the development of one or more of the 12 graduate attributes that have been identified by the Canadian Engineering Accreditation Board. The table below shows the graduate attributes covered in BIOE 4610 in relation to the assessment element that contributes to your overall grade in the course. The final column indicates the approximate level of development in graduate attributes that is anticipated in this course.

Assignment Extension and Late Submission Policy

Deadlines are a reality in the world of engineering; we expect assignments to be completed on time. Assignments submitted after the due date will be docked 10% per day. There will be no “make-up” midterms; students who miss a midterm with a reasonable explanation will have the value of the final examination increased by the appropriate percentage.
Assignment Descriptions

*Laboratory Assignments:* There will be weekly labs throughout the semester. Many of these labs will require some type of written assignment.

*Weekly Homework Assignments:* The lecture content of the course will closely follow a textbook. To encourage reading of the textbook, questions based on the textbook readings will be assigned.

*Design Project:* Working in teams, students will prepare a conceptual design for a scenario provided by the course instructors. Students are expected to research the topic using the internet or other resources. The conceptual design should be thoroughly described in a written report. Students will make an oral presentation of their conceptual solution. Detailed instructions will be provided later in the term.

A *midterm* examination will be scheduled in the middle of the semester. A *final* examination will be scheduled during the examination period.

**Important Dates**

**UNIVERSITY & COURSE POLICIES**

**Using Copyrighted Material**

Please respect copyright. We will use copyrighted content in this course. The content used is appropriately acknowledged and is copied in accordance with copyright laws and University guidelines. Copyrighted works, including those created by us, are made available for private study and research and must not be distributed in any format without permission.

**Recording Class Lectures**

Dr. Danny Mann, Dr. Jacquie Ripat, and the University of Manitoba hold copyright over the course materials, presentations and lectures that form part of this course. No audio or video recording of lectures or presentations is allowed in any format, openly or surreptitiously, in whole or in part without permission from Dr. Danny Mann or Dr. Jacquie Ripat. Course materials (both paper and digital) are for the participant’s private study and research.

**Course Technology**

As a courtesy to both the instructors and your classmates, use of cell phones is not permitted during class time. Please remember to switch your cell phone to vibrate mode to avoid interruptions. Laptops may be used during lectures only for the purpose of taking notes. Some course materials will be available through UM Learn.
Class Communication
The University requires all students to activate an official University email account. For full details of the Electronic Communication with Students please visit:
http://umanitoba.ca/admin/governance/media/Electronic_Communication_with_Students_Policy_-_2014_06_05.pdf
Please note that all communication between you as a student and your instructors/TAs must comply with the electronic communication with student policy (http://umanitoba.ca/admin/governance/governing_documents/community/electronic_communication_with_students_policy.html). You are required to obtain and use your U of M email account for all communication between yourself and the university.

Academic Integrity
Plagiarism or any other form of cheating in examinations, term tests or academic work is subject to serious academic penalty. Cheating in examinations or tests may take the form of copying from another student or bringing unauthorized materials into the exam room. Exam cheating can also include exam impersonation. A student found guilty of contributing to cheating in examinations or term assignments is also subject to serious academic penalty. Students should acquaint themselves with the University’s policy on plagiarism, cheating, exam impersonation and duplicate submission. Electronic detection tools may be used to screen assignments in cases of suspected plagiarism.

Referencing Style
Students are expected to follow the CSBE reference style when citing references in course assignments. The Biosystems Engineering Citation Guide – CBE Style is available through UM Learn. Please refer to this guide to ensure that you follow the correct referencing style.

Expectations: You Can Expect Us To
Learning is most effective when both the teacher and the student are engaged in the subject material. The role of the teacher, therefore, is to create an environment that facilitates student engagement (and therefore learning). In this course, some dissemination of information will occur using the traditional lecture format. However, the course will also utilize other techniques such as classroom discussion of readings and case studies.

Expectations: We Expect You To
We expect you to be in attendance, and on time, for all scheduled lectures and labs. If you must be absent, please show us the courtesy of sending an e-mail notifying us of your absence. To benefit the most from this class, you must be willing to participate in class discussions. Therefore, you will be expected to prepare for class by reading the assigned materials.

Student Accessibility Services
If you are a student with a disability, please contact SAS for academic accommodation supports and services such as note-taking, interpreting, assistive technology and exam accommodations. Students who have, or think they may have, a disability (e.g. mental illness, learning, medical, hearing, injury-related, visual) are invited to contact SAS to arrange a confidential consultation. Supplemental Course Information for BIOE 4610

All courses in the Biosystems Engineering program are expected to contribute, in some way, to the development of one or more of the 12 graduate attributes that have been identified by the Canadian Engineering Accreditation Board. The 12 graduate attributes have been defined below for your information.

Graduate Attributes

1. **A Knowledge Base for Engineering**: Demonstrated competence in university level mathematics, natural sciences, engineering fundamentals, and specialized engineering knowledge appropriate to the program.

2. **Problem Analysis**: An ability to use appropriate knowledge and skills to identify, formulate, analyze, and solve complex engineering problems in order to reach substantiated conclusions.

3. **Investigation**: An ability to conduct investigations of complex problems by methods that include appropriate experiments, analysis and interpretation of data, and synthesis of information in order to reach valid conclusions.

4. **Design**: An ability to design solutions for complex, open-ended engineering problems and to design systems, components or processes that meet specified needs with appropriate attention to health and safety risks, applicable standards, and economic, environmental, cultural and societal considerations.

5. **Use of Engineering Tools**: An ability to create, select, apply, adapt, and extend appropriate techniques, resources, and modern engineering tools to a range of engineering activities, from simple to complex, with an understanding of the associated limitations.

6. **Individual and Team Work**: An ability to work effectively as a member and leader in teams, preferably in a multi-disciplinary setting.

7. **Communication Skills**: An ability to communicate complex engineering concepts within the profession and with society at large. Such ability includes reading, writing, speaking and listening, and the ability to comprehend and write effective reports and design documentation, and to give and effectively respond to clear instructions.

8. **Professionalism**: An understanding of the roles and responsibilities of the professional engineer in society, especially the primary role of protection of the public and the public interest.

9. **Impact of Engineering on Society and the Environment**: An ability to analyze social and environmental aspects of engineering activities. Such ability includes an understanding of the interactions that engineering has with the economic, social, health, safety, legal, and cultural aspects of society, the uncertainties in the prediction of such interactions; and the concepts of sustainable design and development and environmental stewardship.

10. **Ethics and Equity**: An ability to apply professional ethics, accountability, and equity.

11. **Economics and Project Management**: An ability to appropriately incorporate economics and business practices including project, risk, and change management into the practice of engineering and to understand their limitations.

12. **Life-long Learning**: An ability to identify and address their own educational needs in a changing world in ways sufficient to maintain their competence and to allow them to contribute to the advancement of knowledge.

While there are likely some aspects of many of these attributes that can be found in this course, the attributes being emphasized in this course are: 1) **A Knowledge Base for Engineering**, 2) **Problem Analysis**, 4) **Design**, 5) **Use of engineering tools**, 7) **Communication Skills**, and 12) **Lifelong Learning**.
