CANADA AND GLOBAL PUBLIC HEALTH: MOVING FROM STRATEGY TO ACTION

An International Conference

Canada's commitment to global public health policy reform, program implementation and ongoing preparedness has been heralded around the world. However, there remain many critical unmet needs, particularly with respect to translating promising strategies and interventions into better health outcomes and improved equity.

Canada and Global Public Health: Moving from Strategy to Action, a conference hosted by the University of Manitoba and the Gairdner Foundation, is a forum for identifying promising strategies through which Canada can contribute to addressing these unmet needs. The conference brings together Canadian and international leaders to present and discuss key issues in global public health, take stock of what has been accomplished, and identify ways in which Canada can move from strategy to action.

The University of Manitoba and Global Health

The U of M has been a leader in global health for several decades, contributing to landmark discoveries and innovations that have improved public health programs, including strategies to prevent HIV, the development of the Ebola virus vaccine, and innovations in maternal, newborn and child health programs.

The U of M has established a unique network of global partnerships with national programs (e.g., India, Pakistan, Kenya, Nigeria, Ukraine), leading global health organizations (e.g., World Health Organization, World Bank, Bill & Melinda Gates Foundation), and diverse academic institutions and civil society organizations.

With permanent offices in India, Kenya, Pakistan and Nigeria, the university currently has more than 1,400 faculty and staff deployed. Over the past decade, the U of M has received global funding in excess of \$250 million, with more than 95 per cent from international funding sources.

The Gairdner Foundation

The Gairdner Foundation was established in 1957 with the main goal of recognizing and rewarding international excellence in fundamental research that impacts human health. Seven awards are given annually, among them the John Dirks Canada Gairdner Global Health Award, specifically for impact on global health issues.

In all categories, 373 awards have been bestowed on laureates from 30 countries and of those awardees, 87 have gone on to receive Nobel Prizes.

The Gairdner Foundation also engages in outreach programs across Canada and acts as a convener with the public, policymakers and other stakeholders on the impact of science on our everyday lives.
