

## Fun Bee Facts from [beemaids.com](http://beemaids.com)

- While some plants rely on wind to provide pollination, and others are self-pollinating, most flowering plants need the services of natural pollinators, such as honeybees, to do the work.
- Many of the crops grown on the Canadian Prairies require the use of pollinators: some farmers will even pay beekeepers to have hives located on their land.
- Many of the plants that honeybees help to foster provide seeds, fruit, and nuts that feed numerous animal species native to Canada.

DRAW IN THE FLOWERS FOR  
THE BEES TO POLLINATE!
