<tr>
<td>Summary:</td>
<td>The purpose of this paper is to present results from the first five-year phase of a large fisheries co-management research project implemented by the International Center for Living Aquatic Resources Management (ICLARM) and the Institute of Fisheries Management (IFM), with national partners in Asia and Africa. More specifically, the paper will present results of conditions which affect the success of co-management as identified through the project's research activities in Asia. The 18 conditions identified as being of high importance for success are grouped into three categories: supra-community level, community level, and individual and household level.</td>
