

Internal Medicine – Hematology

Available in all electives periods. For interested students this elective may include the opportunity to become involved in a concise research project.

By the end of this elective period the student shall:

- Have had the opportunity to assess patients in the hematology outpatient clinics and to assess in-patient hematology consultations under the supervision of residents and attending medical staff.
- Have had the opportunity to review peripheral blood film and bone marrow morphology and coagulation studies.
- Have the opportunity to attend hematology rounds.

This elective will also provide the applicant with the capacity to:

- To review the clinical presentation and investigation of common haematological problems.
- To gain exposure to the workup and initial treatment of common haematological malignancies.

Call Responsibility - Discuss with the Department of Internal Medicine Education Coordinator.

Availability - This elective is conducted at CancerCare Manitoba - Health Sciences Centre or St. Boniface General Hospital venues. Electives can also be arranged in a specific area of hematology to be tailored to the student's interest.
